Instructions: Find capacity and diameter of your tank. Example: If you have a 1000 gallon Fuel Oil Storage Tank, 48" diameter, look in the top column for 1000. Find 48" under the 1000 in the second column. By comparing the height of the oil which you have obtained on the gauge stick with the column under the 48" diameter, you have the amount of oil in your tank. If oil shows on stick at 22" there is 451 gallons in tank, etc.
